## ATTRIBUTES EPIDEMIC IN NORTHERN CANADA TO US BACTERIOLOGICAL EXPERIMENTS

Paris, 2 October -- The weekly periodical Action 1 sports that Berezowsky, Canadian progressive, presented a memorandum to the Canadian Minister of National Defense, warning of a plague epidemic in the far north of the country. Berezowsky emphasized that this disease usually breaks out in tropical countries during intense heat waves and has never before appeared in northern regions.

Supporting statements of witnesses presented by Berezowsky prove that the plague has appeared only in the vicinity of bases placed at the disposal of US military forces in Canada.

On basis of these statements, Berezowsky asserted in his memorandum that the appearance of the plague in the frozen regions of northern Canada can have only one explanation: the US scientists are conducting their bacteriological experiments on the Canadian Eskimos.

This matter caused alarm in the US and Canadian press, but in the last few days, no more news on this subject has appeared, and the Canadian government has not even ordered an ... vestigation of this matter.
